**TO:**

UET Recycling Industrial Water LTD.  
Attn: Mr. David Sherzer

**RE: Recommendation letter for UET**

Dear Sirs,

For more than 10 years now, we are operating UET's designated units to prevent scale, corrosion and biolife problems in the closed cooling systems of the NaanDanJain factories. The units model are UET-CCWS and their purpose is to maintain the smooth functioning of critical cooling systems in service of production lines in our company.

Before integrating UET's technology we used to suffer repeatedly serious problems of corrosion, scale sedimentation and biolife in the various systems. We had to frequently shut down the production in order to stabilize the system and had to spend high costs for maintenance, power expenses and malfunctions.

A short period after integrating UET's units the cooling systems showed substantial improvements: the system was clean of scale deposits and the water became clear and transparent. After that success we had purchased and integrated more units.

The routine service provided by UET included site visits, water analysis reports, on-going service to the units, replacing consumable items and fixing any problems. The UET personnel were always professional and pleasant.

In all my 35 years of experience in operating water systems, I have never encountered such an efficient water treatment technology. I highly appreciate and strongly recommend using UET's technology and equipment.

Sincerely,

Didi Sol  
Technical Support Manager
